White tempo moves on self-blocking squares, with unpin of white mating pieces(Black corrections). An excellent achievement.

According to the author: "Tries with inversion of black moves (1.Bd3? & 1.Be5? –both Vladimirov effects) prevent White to make the necessary move."

Unique presentation of thematic feature: White occupies the square which is needed for Black tempo move!

Probably the first H#2 showing four different Black tempo moves by four different units in two solutions - an incredible finding!

My congratulations to the incontestable winner of the group.

Different black self-blocks on f6, creation of black half-pin by the Q, then interference on a black line allows the mate.

The tries with inversion of black moves fail because of the harmful effect of interfering with a Q-line (Vladimirov effects in helpmate genre).
