Asymmetry based on the differences between Circe and File-Circe

The theme of this TT was: ...for all kinds of problems where (in the diagram or later) White has a battery directed at the black K, but moves another piece onto the battery line.

In the diagram, there are two w batteries: Rose d7 & BPs b6 & f6; the moves BPa4 & g4 as well as Qb2 & Qf2 are thematic.

File Circe: a captured unit is reborn on the file of the capture rather than on its normal game-array square. Thus in b), the captured black knight is reborn on a8 (try) and on g8 (solution).

Fairy pieces: in b) Zebrarider is a variant of the Nightrider, with (2,3) steps; in c) Root-25-Leaper is a variant of the Knight, with (3,4) or (0,5). steps

The theme of this TT was: ... for all kinds of problems where different white pieces close the same black line. In this problem the thematic squares are b3 (for Kc4), and e5 & e6 (for Ke4).

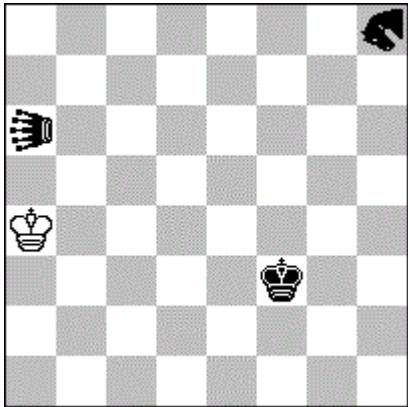

It is noteworthy here that, after leaving a1, all the white interference pieces have a very different route for the thematic squares, though the time needed is similar, 12 moves. During these routes there are various Rundlaufs and switchbacks; e.g. in c) the w Root-25-Leaper moves to h2 three times! In the mating position, those pieces each guard the square e6 (from g5, h8, and h2).

The judge was Kjell Widlert. Tested C+ by Fairybadix.

The wK makes a long Rundlauf to get the bP to g3. The zero-moves by the Rose are used for that purpose, but as Rose cannot make the zero-moves on every square, it must be forced onto such squares where the zero-moves are possible.

48.nDRb3 nARA2 49.nDRb1! nGIxb1(nDRb8) 50.nDRb2==

The supposed stalemate position is nARA2+nDRb2+nGIb1. To achieve that goal, the following is necessary:

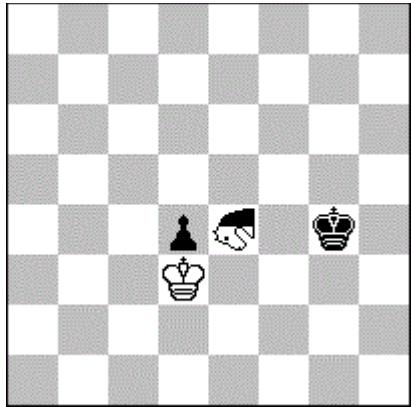

- 1) The neutral Zero a1 has to make two tempo moves, 2.n0a1-a1! and 17.n0a1-a1!.
- 2) The neutral Zero a1 must be captured (without a Circe rebirth) by the neutral Giraffe:
35.nGIxn0a1. The neutral Alfilrider and the neutral Dabbabarider are basically moving on the white squares, so they are not likely to make the capture of the neutral Zero on a black square a1.
- 3) In order to reach the square b2 in the stalemate position, the neutral Dabbabarider has to move from the white squares to a black square. That is possible only with the help of a Circe rebirth, which happens in the last minute: 49.--- nGIxb1(nDRb8) and then the neutral Dabbabarider can make the stalemating move 50.nDRb8-b2==.
