Comments Reciprocal creation of black batteries. Each black battery transform to white battery.

**Anti-Andernach :**

*A unit which moves without capturing (except a King) changes color (more exactly, it takes the color of the opposite side : a neutral piece moved by White becomes black...).*

*A "new" white Rook appearing on a1 or h1, or a black Rook on a8 or h8, can castle.*

All the possible pawn moves by a knight

**Point Reflection:**

*When two pieces stand on squares which are symmetric with respect to the central point of the chessboard, they exchange their walk.*

*Exception to the rules by default: A Pawn is dummy on its 1st rank.*

Comments Quadrable Schnoebelen by the same white pawn

**Anti-Super-Circe :**

When a capture is made, the capturing unit (including King) must be replaced on any empty square.

Exception to the default rules: a Pawn is dummy on its 1st rank.

**KoBul Kings :**

When a piece (not a Pawn) is captured, the royal piece takes the nature of the captured piece.

When a Pawn is captured, the royal piece becomes a King.

Comments

King cross result to remote mates

**Circe parrain:**

The single move following a capture, the captured unit (except a King) accomplishes, from its capture square, an exact copy of that next move. If the arrival square is occupied or if the journey brings it out of the board, the captured unit vanishes.

**Einstein:**

Non capturing moves: Queen->Rook->Bishop->Knight->Pawn

Capturing moves: Pawn->Knight->Bishop->Rook->Queen

Comments

In a cyclic way, one black piece checks white king and changes color to the other two pieces.

**Masand :**

When a piece gives a direct check, all the pieces it controls or threatens (except the Kings) change color.

A Rook becomed white on a1 or h1, or black on a8 or h8, can castle.
